DETAILED ACTION

1. Claims 1-16 are directed to an allowable product. Pursuant to the procedures set forth in the Official Gazette notice dated March 26, 1996 (1184 O.G. 86), claims 17-26, directed to the process of making or using the patentable product, previously withdrawn from consideration as a result of a restriction requirement, are now subject to being rejoined. Claims 17-26 are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Since all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, the restriction requirement made in the Office action mailed on April 8, 2004 is hereby withdrawn.

REASONS FOR ALLOWANCE

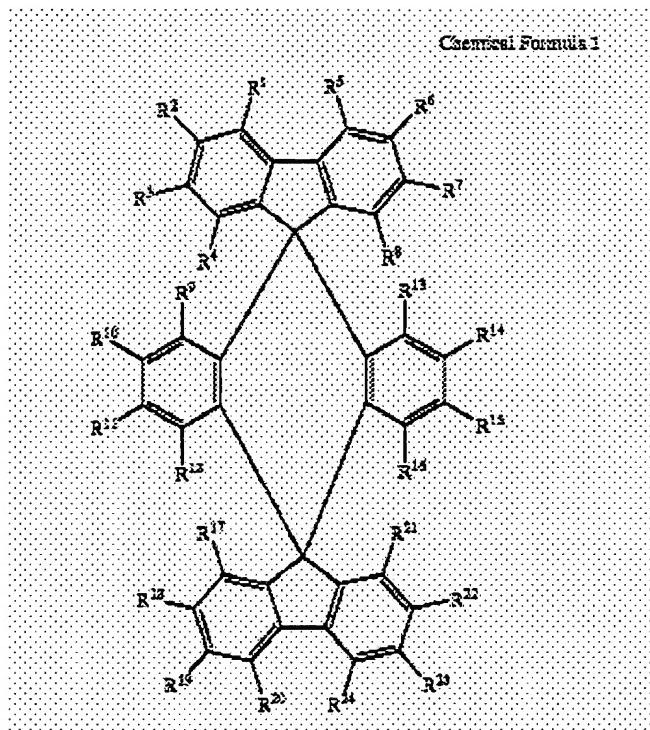

2. The following is an examiner's statement of reasons for allowance: The prior art does not provide for an organic electroluminescent ("EL") device comprising:
an anode; a cathode; and at least one layer located between the anode and the cathode,
wherein at the at least one layer comprises a light-emitting layer having a double-spiro
compound of the Chemical Formula I:

wherein R1 through R24 are substituent groups, identical or different, and wherein not all of R1 through R24 are hydrogen.

Additionally, the prior art does not provide for a method of generating visible light from an organic electroluminescent (“EL”) device comprising:

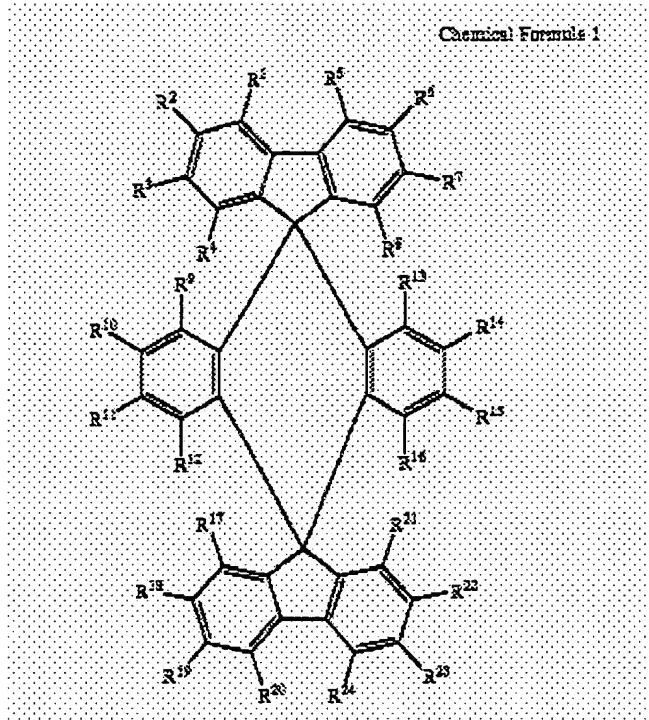

an anode; a cathode; and at least one layer located between the anode and the cathode, wherein at the at least one layer comprises a light-emitting layer having a double-spiro compound of the Chemical Formula I:

wherein R1 through R24 are substituent groups, identical or different, and wherein not all of R1 through R24 are hydrogen, comprising:

applying electric power between the anode and cathode of the organic EL device; the cathode injecting electrons toward the light-emitting layer; the anode injecting holes toward the light-emitting layer; and allowing recombination of at least part of the injected electrons and holes in the light emitting layer, thereby generating visible light from the light-emitting layer. The prior art does not provide for a method of manufacturing the organic electroluminescent (“EL”) device comprising:

an anode; a cathode; and at least one layer located between the anode and the cathode, wherein at the at least one layer comprises a light-emitting layer having a double-spiro compound of the Chemical Formula I:

wherein R1 through R24 are substituent groups, identical or different, and wherein not all of R1 through R24 are hydrogen, the method comprising:

forming a first conductive layer;

depositing a material comprising the double-spiro compound of the Chemical Formula I on a first conductive layer so as to form at least one layer comprising the light-emitting layer,
and

forming a second conductive layer on the material, wherein either of the first and second conductive layers corresponds to the anode or cathode.
